DEVELOP ENTERPRISE
APPLICATIONS FAST

The evolution of digital technologies and the constant shift in customer expectations and behavior presents businesses with an unprecedented risk of disruption. Moreover, both old and new competitors are just a click away for customers who are increasingly willing to switch if their expectations are not met.

These market realities put a great emphasis on customer-centric innovation for every business. In order to respond to this business need, businesses require developing and delivering solutions really fast.

Recent research shows that IT leaders have been struggling with mounting challenges around application delivery. Developer shortages and skill-set challenges are at an all-time high creating a hindrance to delivering enterprise applications in a rapid and reliable fashion.

Enterprise Application Development Challenges

Developing an Enterprise Application is a meticulous task and it requires precision, vision, and expertise. And when it comes to developing a sophisticated enterprise-scale application, every business struggles with the following challenges:

- Changing business requirements and environment
- Evolving technology
- Interoperability
- Multi-device approach
- Application security
- Dealing with big data
- User interface and experience
- Low ROI
- Time and cost
- Maintainability

UniServe™ NXT- Unlock the power of Low-code

UniServe™ NXT platform helps address challenges pertaining to application development while enabling enterprises to increase development productivity, decrease personnel costs, decrease application operations' cost, and reduce dependencies on traditional programming.

The low-code abilities built on UniServe™ NXT platform enables the development and delivery of applications faster by stakeholders with no prior coding experience –known as citizen developers.

Rather than writing thousands of lines of complex code, the drag-and-drop graphical interface and tools enable business users to create enterprise-scale applications visually and deploy the solutions at lightning-fast speed to quickly adapt to changing business needs.

The platform capabilities offer significant business benefits. They increase productivity by 500%, decrease time to market by 80%, reduce IT costs by 70%, and significantly reduce communication gaps between business and IT.

The Features

Visual Model-based Development

All methods and processes are presented visually in UniServe™ NXT platform. This means that you can create your own application in the form of a flow chart for better understanding. This makes creating applications easier with visual models and methods.

Drag-and-Drop Interface

Drag-and-drop features to create applications make the whole process of application development simpler and easier. Not only does it eliminate the requirement of professional help, but it also saves time by completely terminating the need for typing long codes, thus making low code development user friendly.

Intelligent Automation

UniServe™ NXT platform comes with the power of intelligent automation, Business Process Management (BPM) to organize & coordinate users, tasks, systems, rules management (BRM), and bots (RPA) based on the business needs at a given point in time. It also enables integration of various systems operated in the organization, which inhibits duplication of data and users need to work only on one integrated platform.

Configurable Integration

With changing technologies and evolving business dynamics, existing integration methods are no longer as effective. To survive and thrive in this evolving ecosystem, enterprises must have the ability to extend and accommodate new integration solutions that support new use cases.

UniServe™ NXT comes with a compelling MWaaS offering that supports all the enterprise-scale hybrid integration opportunities. This future-ready, multi-purpose platform provides an array of hybrid integration capabilities, including cloud integration, rapid API creation/composition and management, mobile application/back-end, and IoT integration.

Increased Operational Efficiency with BPM

BPM based technology enables enterprises to support business process modeling to capture business processes as workflow specifications, business process reengineering to optimize specified processes, and workflow automation to generate workflow implementations from workflow specifications including human interface points.

The Features

Microservices for Agility and Cohesion

In order to achieve sustainable growth and stay ahead of the competition, enterprises require faster software delivery. The platform with its Microservices architecture, empowers enterprises with agility, composability, comprehensibility, easy and independent deployability, resulting in greater efficiency, better runtime scalability, stronger resilience, and higher availability for better customer experience.

These services enable businesses to follow the best practices while building the solution. Moreover, these services can be leveraged as an asset to reuse in multiple scenarios.

Reusability

The pre-configured modules and functionalities can be reused for all kinds of enterprise-scale applications. This allows users to use pre-built assets to create new applications quicker and more efficiently.

Experimentation

Businesses need to disrupt the market with new business models that deliver value to their customers in a better way. UniServe™ NXT platform allows experimenting and building different business models for different scenarios and hypotheses. It provides a great environment for different business teams to collaborate, try out different prototypes and innovate a new business model.

Cross-Platform Functionality

With the explosion of new devices and technologies, it is imperative that applications run across all devices and operating systems. UniServe™ NXT platform offers multiplatform accessibility to reduce unnecessary hassle, hence saving your resources and time.

Security

The platform has been built on the privacy-by-design principle. This highly secure application development platform ensures the utmost security and safety of the application built on the platform.

The Features

Scalability

UniServe™ NXT is an enterprise-grade platform and it allows easy scaling for a large audience. No matter how much your business grows, the platform can deal effectively with the increase in users, be it twenty or twenty thousand.

Declarative Tools

Declarative tools of the platform, such as visual models and business rules allow users to modify and change their applications without professional assistance and coding. With this power-packed platform, you can change or add things to your application on your own. This makes app development easier and faster. These codes also allow debugging, assessment, and correction of applications to ensure flawless user experience.

Data Virtualization

The world is moving away from data consolidation to the data connection. Data virtualization ensures relevant, timely, and complete data without physical integration. Built-in data connectors, adapters, coordinators, and translators are required to combine new and existing data sources effortlessly.

The data virtualization capability of UniServe™ NXT ensures business continuity in a hybrid model in the lifecycle of complete digitization.

Key Capabilities

UniServe™ NXT comes with high-end capabilities and endless possibilities that makes your job of developing enterprise applications easier, faster, and smoother.

- Intelligent Delivery
- Agile Change Management
- D.I.Y Enterprise apps
- Experimentation
- Modular Architecture
- DevOps Collaboration
- Reusable assets
- Automated Testing

The UniServe™ NXT advantage

100% Branding Guidelines Compliance

The platform enables you to import your branding guidelines and existing HTMLs while developing enterprise applications. This means you can build apps perfectly aligned with your marketing guidelines, ensuring seamless and consistent experience for your customers.

Future proofing your apps with Micro Frontends

Our extended micro services architecture to micro frontends gives enterprises the flexibility to upgrade the frontend without disturbing the customer's experience.

Tech Superiority

The platform supports all technology needs whether it is Angular/ React/ SQL/ SQL.

We offer flexibility thus making development easier for our users.

Collaboration at its best

All modules within the platform such as Screens, Data Modeler, API Engine, Workflow etc. can be configured simultaneously. This architecture gives your business, design, and various IT teams the ability to collaborate with ease.

The UniServe™ NXT advantage

Co-creating a High-touch Operating Model

We believe in collaboration, co-creating and winning. We are strongly invested in empowering you and creating value together. We provide you with all the necessary assistance so that your team can come up with outstanding solutions to make your business perform better and drive more revenue.

No vendor lock-in

There is no vendor lock-in and should you ever decide to go back to traditional development formats, we give you the flexibility of exporting your code.

Seamless integration into the existing technology

The OSGi framework enables enterprises to use and sell each module separately. You are not forced to use the entire platform to develop applications if you already have a module available in your enterprise. Integrate it with the platform, and you're ready to go.

20 Years of Data Management Packed In

UniServe™ NXT has over two decades of strong data management experience and 100s of adaptors to popular enterprise systems, ranging from legacy mainframes to the latest billing systems, CRMs, ERPs etc.

Whether you're a small business or an MNC, if you want to develop applications faster, reduce cost and time to market, and enjoy all the advantages of advanced technologies, it's time to unlock the power of UniServe™ NXT. While helping enterprises navigate a dynamic business eco-system, UniServe™ NXT, our digital business platform is slated to become the new normal for enterprise technology needs.
